Introduction :-

Educational excursions are of great value for the students of science. The theoretical knowledge earned by a student about a living things such as plants and animals remains limited and completed. But if the students study this living things in their natural conditions, the knowledge will be increased. Therefore to acquire complete knowledge about the natural habit, habitat and animals which are found in a particular area of climate and physical conditions one must go through their natural existence and in their natural environment.

As a science of living beings it has a wide range of study. So, one can't summarize all these things at a time. So an area is selected within a time limit within this area study the habit, habitat, temperature etc. Such as specific study helps us record different habit, habitats of various specific plants and animals also to understand the ecological interaction prevailing in the area.

Industrial visits are usually the first point of interaction between a student and a live working industry. The

Students learn about the latest technology trend and make up their minds about their future jobs or area of interest.

Selection of place:

In course of industrial tour we visited QUALITY PHARMACEUTICAL INDUSTRY. It is situated in the district of Dibrugarh of Assam. This industry is rich for the manufacturing of antibiotics.

On 29th October 2022 we started our journey from Tezpur Chariali at 6:0 am. We reached Demow after 2.45 hours and there we took breakfast which was sponsored by Dr. Nazim Foid Sir. After breakfast we started our journey and we arrived in the industry at 10.45 am. After getting the permission we entered to the industry. We met the manager of the industry. He is very intelligent person and he told us about the industry.

After this we entered inside the industry and we changed our dress. A special apron wore which was gifted by the industry manager. The industry have three floors after this we visited

whole the industry. The industry manager informed us and told the different types of instruments and their functions. The industry manager and two industry employees helped us to know about the machine and the function, procedure and the packing system. We saw autoclave, spectrophotometer, oven etc. We saw a microbiology laboratory. We can't capture any photographs inside the industry because it is totally prohibited by official. Quality pharmaceutical industry manufactures various types of tablets and cosmetics some medicine.

After the industry visit we changed our apron and went to outside the industry. Then we took ^{off} lunch in a hotel. After took the lunch we started our return journey from that hotel at 1.15 pm. We reached our home town at 8.30 pm.

Conclusion:-

Industrial visit is one of most important source of acquire knowledge and I have no hesitation to say that it is apart and the pencil of the education system. It always supplement our theoretical knowledge. Bacon says "TRAVELLING IN THE YOUNGER IS A PART OF EXPERIMENT".

I am convinced that such a industrial visit as a whole is really helpful to the students in general to their have to Botany as a disciple of their study in particular.
