## Introduction —

Educational excursions are of great value for the students of science. The theoretical knowledge earned by a student about a living thing such as plants and animals remains limited and incomplete. But if the students study the living things in their natural condition, the knowledge will be increased.

As a science of living being it has a wide range of study. So, one cannot summarise all these things at a time within this area study the habit, habitat, temperature etc.

Industrial visits are usually the first point of interaction between a student and a live working industry. Industrial visit lets students to understand things practically through interaction, working method and employment practices. It helps in gaining knowledge about both theory and practical. The students learn about the latest technology trend and make up their minds about their future jobs or area of interest.

## Selection of place —

In course of industrial tour we visited "Quality Pharmaceutical Industry". It is situated in the district of Dibrugarh of Assam. This industry is rich for the manufacturing of antibiotics.

On 29<sup>th</sup> October 2022 we started our journey from Titabar at 6.0 am. After 2.45 hour we reached Demow where we had our breakfast which was sponsored by Dr. Nazim Farid Sir. After breakfast we started our journey

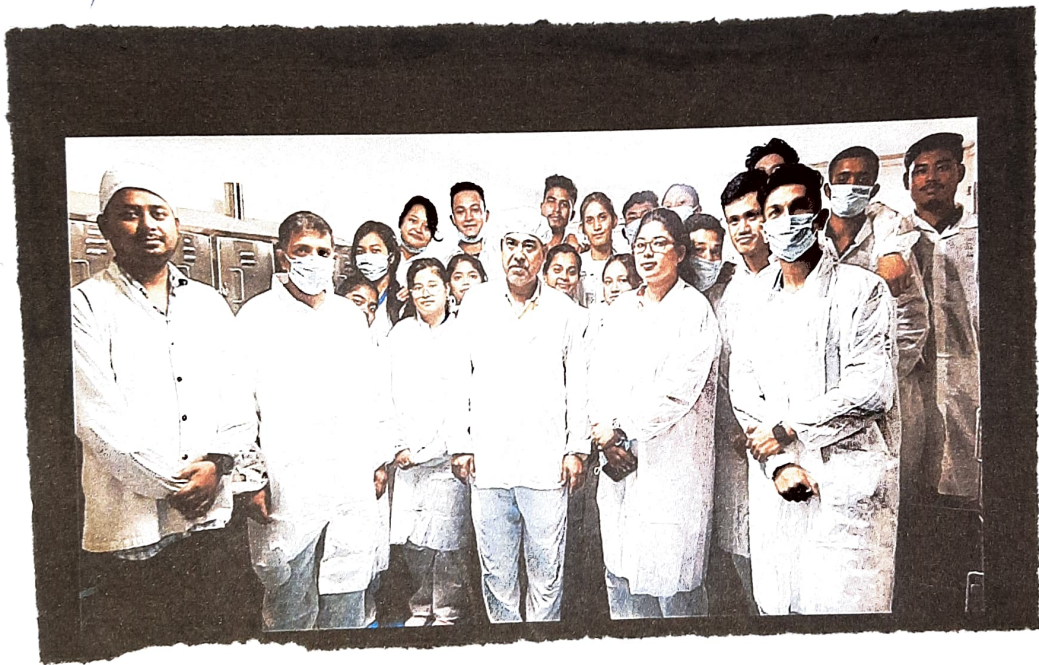

and arrived in the location i.e. "Quality Pharma Industry" at 10.45am. Then we asked permission to enter into the industry. After getting the permission we finally entered to the industry. We met the manager of the industry. He was very kind and intelligent person and he was the one who told us about the industry.

After that we entered inside the industry and we changed our dress. We wore a special apron which was gifted by the industry manager. The industry had three floors and we visited the whole industry. The industry manager told and explain the different types of instruments and their functions in antibiotic preparation. The industry manager and two industry employees helped us to know about the machine and their functions, procedure and packing methods. We saw autoclave, spectrometer, oven etc. We saw a microbiology laboratory.

We can't captured any photographs inside the industry because it is totally prohibited. Quality Pharma Industry manufactures various types of tablets and cosmetics, some medicines like aceclifenac, clonazepam, Levissulpirides, mecobolomin, meropenam, pentoprazole etc are manufacture in the industry.

After visiting the industry we took off our aprons and went outside the industry. They prepared tea and biscuits for us. After having tea we returned from the industry and had lunch in a hotel. After that we started our return journey at 1.15 pm and reached Titabar at 8.30 pm.

## Conclusion -

Industrial visit is one of most important source of acquire knowledge. During the course of industrial visit we have studied various instruments of microbiology. This tour was helpful for me. ~~See also~~

I am convinced that such a industrial visit as a whole it really helpful to the students, in general to those have to Botany as a discipline of their study in particular
